

BA904 Portable Slit Lamp

Precision within easy grasp

The BA 904 Portable Slit Lamp, combining an ergonomic design and Haag-Streit's unsurpassed optical system – the portable BA 904 Slit Lamp has the unique ability to provide high quality examinations even when you practise in more than one consultancy room.

The slit lamp can be used for hand-held operation to examine patients who cannot comfortably sit at a larger slit lamp, yet can be easily reassembled for more traditional joystick/headrest operation. Whichever method is used, the portability does not diminish the quality of the examination. The BA 904 offers a Dioptic range of -8 to +8, an interpupillary range of 53 to 95.

Incredibly portable, the complete kit fits into the specially designed lightweight suitcase and an integrated rechargeable NICAD battery allows up to 45 minutes of continuous use per battery. (Two batteries supplied).

A well-balanced instrument, the BA 904 Slit Lamp is both safe and comfortable for the patient. It filters out hazardous radiation, which means less damage to the retina when using a Volk lens.

High Quality Optics

Incorporates highly acclaimed Haag-Streit optics offering high-resolution examination 10x objectives as standard and 16x objectives as an option.

Versatile

Dual function – ergonomic design enables hand-held examinations or head and chin rest for traditional style examinations.

Portable

Extremely light – easily fits into specially designed customised suitcase. Using both batteries supplied, up to 90 minutes examination is possible away from the consultancy room.

Technologically Advanced

Wider interpupillary, dioptic range and field of view.
